Environmental Policy Grupo Cosmos XXI

The management of GRUPO COSMOS XXI undertakes the commitment to provide the material and human resources necessary to implement and maintain an environmental management system in which quantitative environmental objectives are established, monitored and reviewed in the companies, being appropriate to the purpose and context of each workplace and to the nature and magnitude of the environmental impact of its activities, products and services. The management also undertakes to communicate and support this policy throughout the Group and make it available to all interested parties.

Principles and commitments of the Environmental Policy of GRUPO COSMOS XXI:

The contribution to sustainable development, through the PREVENTION of pollution and the PROTECTION of the environment in relation to the following milestones:

- Fight against climate change, focusing on actions to reduce greenhouse gas emissions, through the gradual decarbonization of the company, the commitment to the use of renewable electricity and constantly working on the search for energy efficiency in our processes and facilities.

- The consumption and quality of water, contributing to a responsible and reasonable use, without waste of the available water resources and a continuous monitoring of those processes that may cause the contamination of the water and soil in our environment.

- The control of atmospheric and acoustic emissions from our activities, seeking to ensure high air quality in our environment and reduce noise pollution.

- Responsible management of chemical products, minimizing their use to what is strictly necessary and seeking alternatives to those products that could be more harmful.

- The sustainable management of resources, through the achievement of efficient processes and sustainable designs that take into account the reuse of materials and their origin, and a responsible supply that is transferred to the entire supply chain of Grupo Cosmos XXI.

- Minimization of the waste generated, prioritizing prevention at source, and seeking alternatives for its recovery through reuse, recovery and recycling whenever possible.

- Protecting the biodiversity of our environment, land use and deforestation.

COMPLIANCE with applicable environmental legal REQUIREMENTS and other requirements to which the organization subscribes for the benefit of its interested parties.

The pursue of the EFFICIENCY and commitment to CONTINUOUS IMPROVEMENT of the management system to enhance the ENVIRONMENTAL PERFORMANCE of each workplace.

Embrace the OPPORTUNITIES to implement environmentally friendly alternatives and likewise achieve OPERATIONAL AND FINALCIAL BENEFITS, in pursuit of sustainability.
